Free, but pre-registration required. Registration form attached. Telephone registration after September 1st.

***Self-certification forms will be provided for 2.0 credit hours for each session (4 hour total)
Credit will be awarded at the discretion of each municipality.***

Our rural roads are a major part of “rural character.” They also require the greatest share of our municipal budgets. Yet we may take for granted their role in the quality of our environment. These workshops will address the many roles that roads can and do play -- as a major land use and social space, as transportation routes and scenic corridors, and through their impact on habitat, and water quality and quantity. This four hour series (two sessions) will provide elected officials, board members, highway department staff, conservation advisory councils and interested residents with information and tools they need to get the most out of our local road network. Presenters include county planners, a municipal attorney, scientists and State agency staff.

Topics include:

- *How “Complete Streets” standards can be applied to provide safe and equitable access to users of all ages and abilities*
- *Planning issues that municipalities frequently face regarding roads and tools they can use*
- *Stormwater management practices that can contribute to road safety, water quality and quantity, as well as scenic impact*
- *Linear “green infrastructure” practices*
- *Reducing the environmental and budgetary impacts of road salt without compromising safety and management*
- *Better culverts: watershed hydrology, stream crossings and climate change, with a look at the Hollowville Creek*
